**WORKSHOP: EMERGING INFRASTRUCTURES FOR CIRCULAR AND REGENERATIVE TERRITORIES**

Chair / *Presidente*: Marina Rigillo (IT)

The workshop seeks to develop an effective analysis about the implementation of emerging infrastructures (Circularity Hubs) within the general frame of urban regeneration programs based on circularity principles. It will particularly focus on sharing the first advances in applying these concepts to the regeneration of critical urban areas (disused, abandoned), implementing an integrated approach to the project of a new type of urban infrastructure which responds to the emergent requests of merging sustainability and circularity assumptions with the need of new public services and spaces for urban life and innovative welfare policies. The workshop aims at feeding the scientific discussion about the development of local networks that integrate equipment and services for the circularity of materials and goods within the general frame of social innovation, actively contributing to the transition towards the circular economy. According to this position, the specific objective concerns the discussion about potential and criticalities in transferring theoretical concepts of circularity and urban metabolism into operative design experiences, intertwining technical feasibility with human, physical, cultural, organic and socio-ecological components.
